

1/2" Low-noise Level Microphone System Type 40HH

Product Data

Features and Applications

- Very Low Sound pressure measurements
- Low-noise product measurements
- Low-level Sound power measurements
- Measurements on hard-disk drives, computer products, quiet rooms etc.

Description

The G.R.A.S. 1/2" Low-noise Microphone System Type 40HH (Fig. 1) can measure sound pressure levels well below the threshold of human hearing; and is amply suitable for use in sound-power measurements on even very quiet products. Its very wide dynamic range permits measurements down to below $-2\text{dB re. } 20\ \mu\text{Pa}$ (in 1/3-octave bands) from 20 Hz to 20 kHz. The Type 40HH comprises:

- a special high-sensitive 1/2" (12.7 mm) Condenser Microphone Type 40AH
- a special 1/2" (12.7 mm) Low-noise Preamplifier Type 26HH

The preamplifier and microphone are an individually-matched combination. To complete the system, a special single or 10-channel power module is required and is available from G.R.A.S., i.e.

- Type 12HF for single-channel measurements, as shown in Fig. 2
- Or
- Type 12HM for multi-channel (1 to 10) measurements

The chosen power module provides all necessary voltages for powering the preamplifier(s) as well as polarizing the microphone(s).

Preamplifier

The Preamplifier Type 26HH (Fig. 1) has a built-in overload indicator (which is repeated on the chosen power supply) and a frequency correction facility for both pressure-microphone operation as well as free-field microphone operation (Fig. 3).

Fig. 2 A complete single-channel low-noise level measuring system

Microphone

The Microphone Type 40AH is an externally polarized microphone with a specially reduced inherent noise floor in order to achieve a high dynamic range and wide frequency range. Its diaphragm is specially tuned to yield high sensitivity coupled with low internal-noise generation.

Frequency Response and Noise Floor

The chosen power supply has a two-position switch for selecting which microphone operation to use, i.e. pressure or free-field. A typical free-field response for an angle of incidence of 0° is shown in Fig. 3 when the Type 40HH is switched to free-field operation. Fig. 4 shows, for a complete low-noise measuring system, a typical noise floor in 1/3-octave bands for both the linear and A-weighted cases.

1/2" Low-noise Level Microphone System Type 40HH
