

ICPU-6 for imc ARGUSfit

6-channel measuring amplifier for voltage and IEPE sensors

The ICPU-6 from the imc ARGUSfit series is a 6-channel measurement amplifier that can be used in conjunction with an imc ARGUS system (or base unit) to which it is directly docked with its housing.

Individually isolated, conditioned and configurable differential channels capture:

- IEPE or ICP sensors (current fed sensors 4 mA)
- Voltage (AC and DC coupling)

Direct connection of IEPE compatible sensors (ICP™, DELTATRON®, PIEZOTRON® sensors) is made via BNC connectors.

Highlights

- Channel individually galvanically isolated
- 220 kHz bandwidth at max. 500 kSps/channel sampling rate
- 24 bit digitisation, internal processing and data resolution
- Status LEDs to indicate connection errors (cable break or short circuit)
- 6 channels in extremely compact design, clickable to imc ARGUSfit systems

Typical applications

- Typical applications
- Acoustics and NVH
- esp. also in connection with imc WAVE software
- IEPE acceleration sensors and microphones
- Explosion testing with ICP-based blast pressure sensors
- Power measurement on 48 V systems (e.g. small electric vehicles) in connection with current measurement via shunt or current transformer

imc ARGUSfit: Flexible modular platform for fast measurement systems

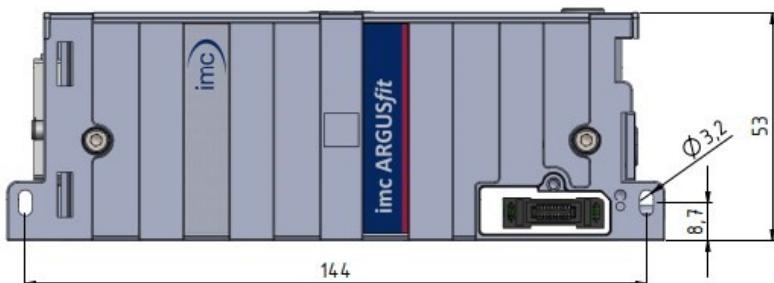

Based on an imc ARGUSfit base unit, imc ARGUSfit measurement amplifier and interface modules can be combined to form complete systems by means of a robust click mechanism, which can even integrate imc CANSASfit modules. The click connectors provide the electrical connection to the power supply and system bus.

For expansion to decentralized distributed topologies, the fast internal ARGFT system bus can be converted to fiber optic cables by means of a clickable fiber converter module.

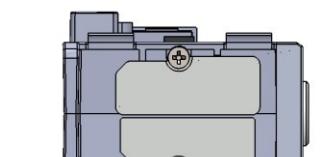

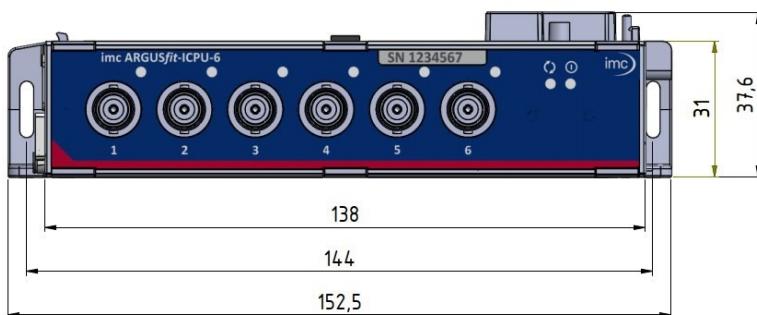

The entire system can be controlled via a common Ethernet connection (LAN/WLAN) with a PC (imc STUDIO software) and can be networked and operated synchronously and uniformly with all other imc data acquisition instrument series. Furthermore, it can also be operated autonomously and stand-alone without PC with data storage on microSD.
